

Sum of complex numbers

$$f() = \{f()[0] + \text{real}(r), f()[1] + \text{imag}(r)\}$$

Product of complex numbers

$$f() = \{f()[0] * \text{real}(r) - f()[1] * \text{imag}(r), \\ f()[1] * \text{real}(r) + f()[0] * \text{imag}(r)\}$$

Two-dimensional argmin

$$f() = \{\min(f()[0], \text{in}(r.x, r.y)), \\ \text{select}(f()[0] < \text{in}(r.x, r.y), f()[1], r.x), \\ \text{select}(f()[0] < \text{in}(r.x, r.y), f()[2], r.y)\}$$
